

Strategic Resources Inc – Case Study

Advanced Asset Tracking for Military Contractors

About Strategic Resources Inc.

For over 20 years, Strategic Resources, Inc. (SRI) has provided quality management consulting, IT, logistics, and engineering services to U.S. military branches, including the Army, Navy, Air National Guard, and Department of Defense. To efficiently manage military contracts, SRI required a robust [Asset Tracking System](#) to monitor government-furnished equipment such as small arms, night vision devices, aircraft parts, and Humvees across ten different Army bases.

The Challenges of Military Asset Tracking

Before implementing our [Asset Tracking Solution](#), SRI faced multiple challenges:

- **Limited Asset Visibility:** Equipment was difficult to track across various military bases, leading to inefficiencies. Did not support editing, performance tracking, or data history.
- **Manual Tracking Methods:** Employees manually recorded asset movements, increasing errors and lost equipment.
- **Maintenance and Service Scheduling Issues:** No automated system to track maintenance schedules for calibrated tools and equipment.
- **Lack of Configurability:** Needed a system that allowed for tailored asset field configurations specific to Army-reported data.

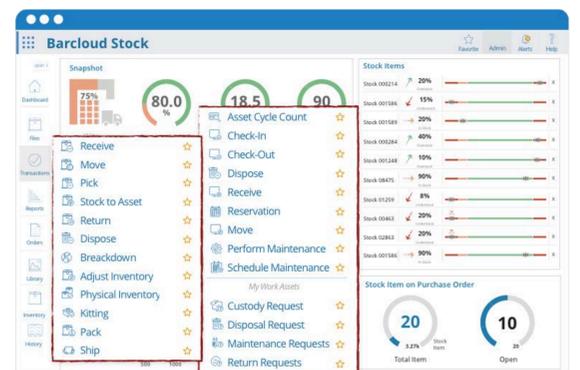

"These challenges prompted SRI to seek an advanced Asset Tracking System with real-time tracking and barcode integration."

Why SRI Chose Our Asset Tracking Solution

SRI selected our Asset Tracking System for its:

- **Complete Asset Control:** Enabled real-time tracking of military equipment across multiple locations.
- **Configurable Data Fields:** Allowed the system to be configured based on Army contract requirements.
- **Barcode and Mobile Integration:** Provided handheld barcode scanners for seamless asset tracking, tracking.
- **Automated Check-Out/Check-In Feature:** The search bar significantly reduced time spent locating specific items.
- **Comprehensive Reporting:** Generated asset usage reports for enhanced contract management and billing.

Implementation and Results: Optimizing Asset Tracking with Barcode Technology

"The system data integration tool was fantastic with the mapping of data fields, enabling us to integrate any data into the system."

– Lorenzo Ceballos, Director of Business Development, SRI

Following thorough research, SRI implemented our [cloud-based Asset Tracking Solution](#), enabling them to manage military assets with greater efficiency. The integration process was smooth, requiring no installation, and employees were trained using the "Train the Trainer" approach for quick adoption.

Key benefits after implementation:

- **Efficient Tool Room Operations:** Check-in/check-out feature streamlined equipment management.
- **Automated Service and Maintenance Tracking:** Scheduled maintenance alerts ensured all assets were in top condition.
- **Accurate Asset Location Monitoring:** Real-time tracking eliminated the time-consuming search for missing items.
- **Comprehensive Reporting Capabilities:** Enabled SRI to generate detailed usage reports, measuring time spent on equipment tasks.

"This capability allows the identification of time spent supporting equipment on this program. We analyze the data to support the effort in getting the right level of effort needed to support equipment tasks."

– Lorenzo Ceballos, Director of Business Development, SRI

Industry

- Government Contracting / Military Asset Management

Challenges

- Tracking military assets across multiple Army installations
- Difficulty managing the movement of assets and tracking check-outs
- Need for real-time visibility into asset location and maintenance history
- Lack of an integrated barcode system for efficient asset tracking

Benefits

- Real-time asset tracking across multiple military bases
- Automated barcode scanning for quick asset check-in/check-out
- Configurable system tailored to military contract requirements
- Seamless integration with Army-reported data

Looking to Transform Your Military Asset Tracking Capabilities?

If your organization needs a scalable and configurable solution to track military assets efficiently, our Asset Tracking System can help.
